September 08, 2021

New realities and processes require novel, vetted solutions for the augmentation of synchronous interaction with asynchronous elements. The Phrazer/Kitsune "Virtual Cockpit" is a breakthrough control panel for staff that shows the status of all patients, their location and progress, while also providing vital alerts, cultural cues and more - all at a glance. This approach revolutionizes the conventional 1:1 model and empowers staff to effectively engage with multiple patients at the same through fully augmented human interactions.

Made to work with the global leading patient engagement system Phrazer/Kitsune, the "Virtual Cockpit" is a secure HIPAA interface for qualified healthcare staff that enables them to track, guide and interact with patients anywhere from anywhere. This web-based interface enables smooth augmentation of onsite staff with off-site resources. It can be accessed via Phrazer using credentials, or accessed on a computer, tablet or even an Android or iPhone. It is lightweight, utilizes minimal network resources, is secure and fully reliable. The robust technology, in conjunction with GeaCom's registered patent set provides the most secure and adaptive platform available.

About GeaCom

GeaCom is a leading global healthcare engagement solutions provider, with its patented systems deployed in hospitals, community clinics, and educational environments. Its systems are developed in the US, and compliant with healthcare regulatory approval and data privacy standards in the countries deployed. The Company's service teams and its partners provide equitable and effective health engagements across all demographics, resulting in improved patient experiences and positive outcomes and productivity improvements for healthcare providers. To date, GeaCom's solutions have provided over 40,000,000 engagements in hundreds of languages, across 5 continents, as we lead the relentless pursuit of equitable excellence in vital services.
